

How Our MetalMade Corten Deer Sculptures Are Secured

One of the questions we're asked most often is:

“How do you stop the sculpture from blowing over?”

Every MetalMade sculpture is supplied with a fixing system specifically designed for its size and intended location.

Hard Surface Installation

For installation onto concrete, paving, patios or stone, each sculpture is securely fixed through its welded steel feet using heavy-duty expansion anchors, providing a permanent and discreet installation.

Sculpture	Through Bolt
Doe	M12 × 163 mm
Stag	M16 × 200 mm
Buck	M16 × 200 mm

Soft Ground Installation

For installation into lawns, borders and landscaped areas, we use specially manufactured steel ground anchors that pass through the sculpture feet and are driven deep into the ground, providing excellent stability while remaining virtually invisible once installed.

Sculpture	Ground Anchor
Doe	M12 × 600 mm
Stag	M16 × 700 mm
Buck	M20 × 800 mm

Engineered for Stability

Every MetalMade sculpture is designed with integrated steel fixing points that allow it to be securely anchored without detracting from the appearance of the sculpture. Whether installed on a patio, driveway, lawn or within a landscaped garden, each fixing method has been selected to provide a strong, reliable installation in normal outdoor conditions.
